01 / Paired input
Control CT and lesion-added CT
Share every exterior voxel
02 / Continue vessels
Mask the inner 14 mm
Fit the same field from both legs
03 / Search the core
10-mm search · 6-mm windows
Three physical template radii
Use the same affine projection, normalization, and ridge-head budget
CT only
$g = 0$
Score the affine residual
Fixed subtraction
$g = 1$
Use the exterior amplitude
Plug-in residual
$g = g_0$
Fit the null gain once
Joint profile
$g = g(h)$
Update gain with the lesion
Shared decision head for crop acceptance · Template maximum for the returned location
